1. INTRODUCTION

1.1 Project Overview :

The project "A CRM Application for TheChaiShop&Co" focuses on developing a Salesforce-based Customer Relationship Management (CRM) system to manage customer, employer, and enterprise accounts efficiently. The system automates sales processes, maintains customer records, generates reports, and improves customer engagement through automated notifications.

The project user story and objectives are defined in the initial section of the document

1.2 Purpose :

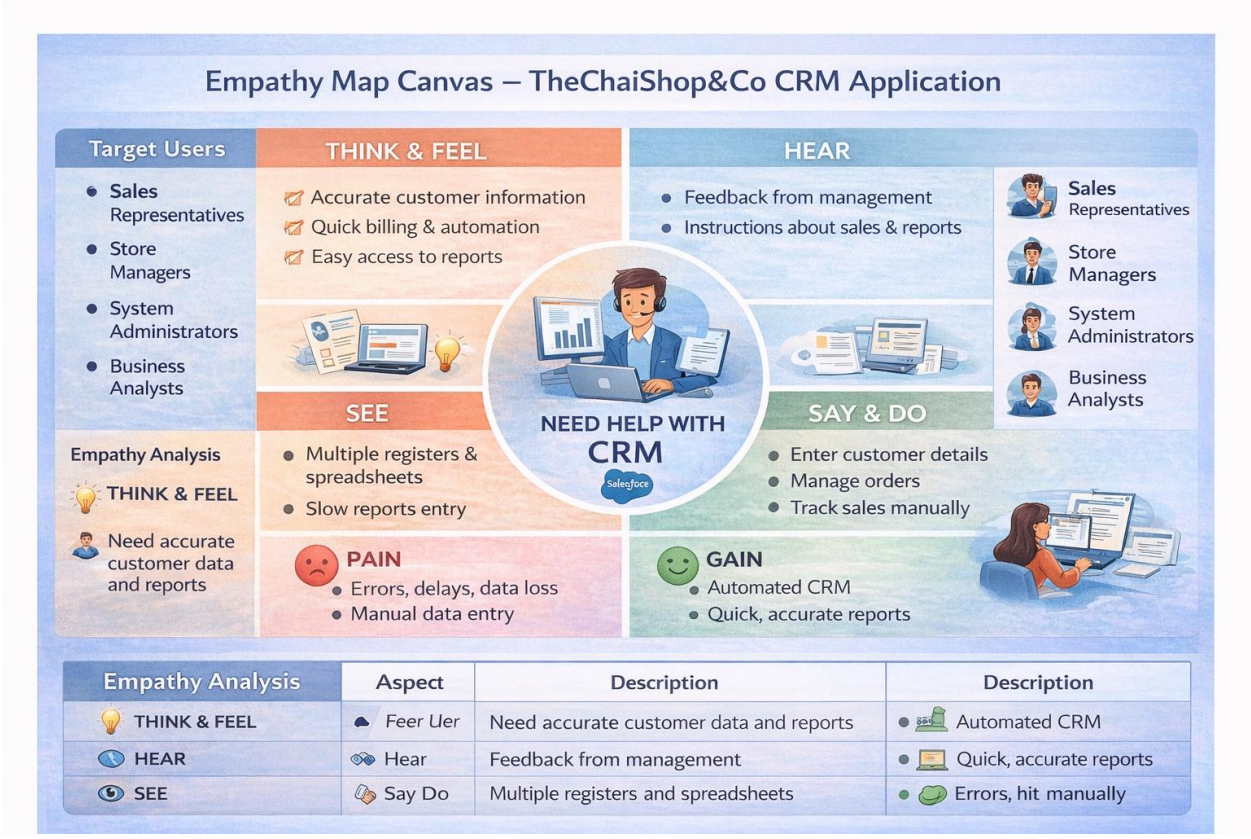
The purpose of this project is to:

- **Streamline customer relationship management**
- **Automate billing and order calculations**
- **Improve data accuracy**
- **Enable data-driven decision-making**
- **Enhance customer engagement through email automation**

2.2 Empathy Map Canvas

Target Users

- **Sales Representatives**
- **Managers**
- **System Administrators**
- **Business Analysts**



4.3 Solution Architecture

Architecture Layers

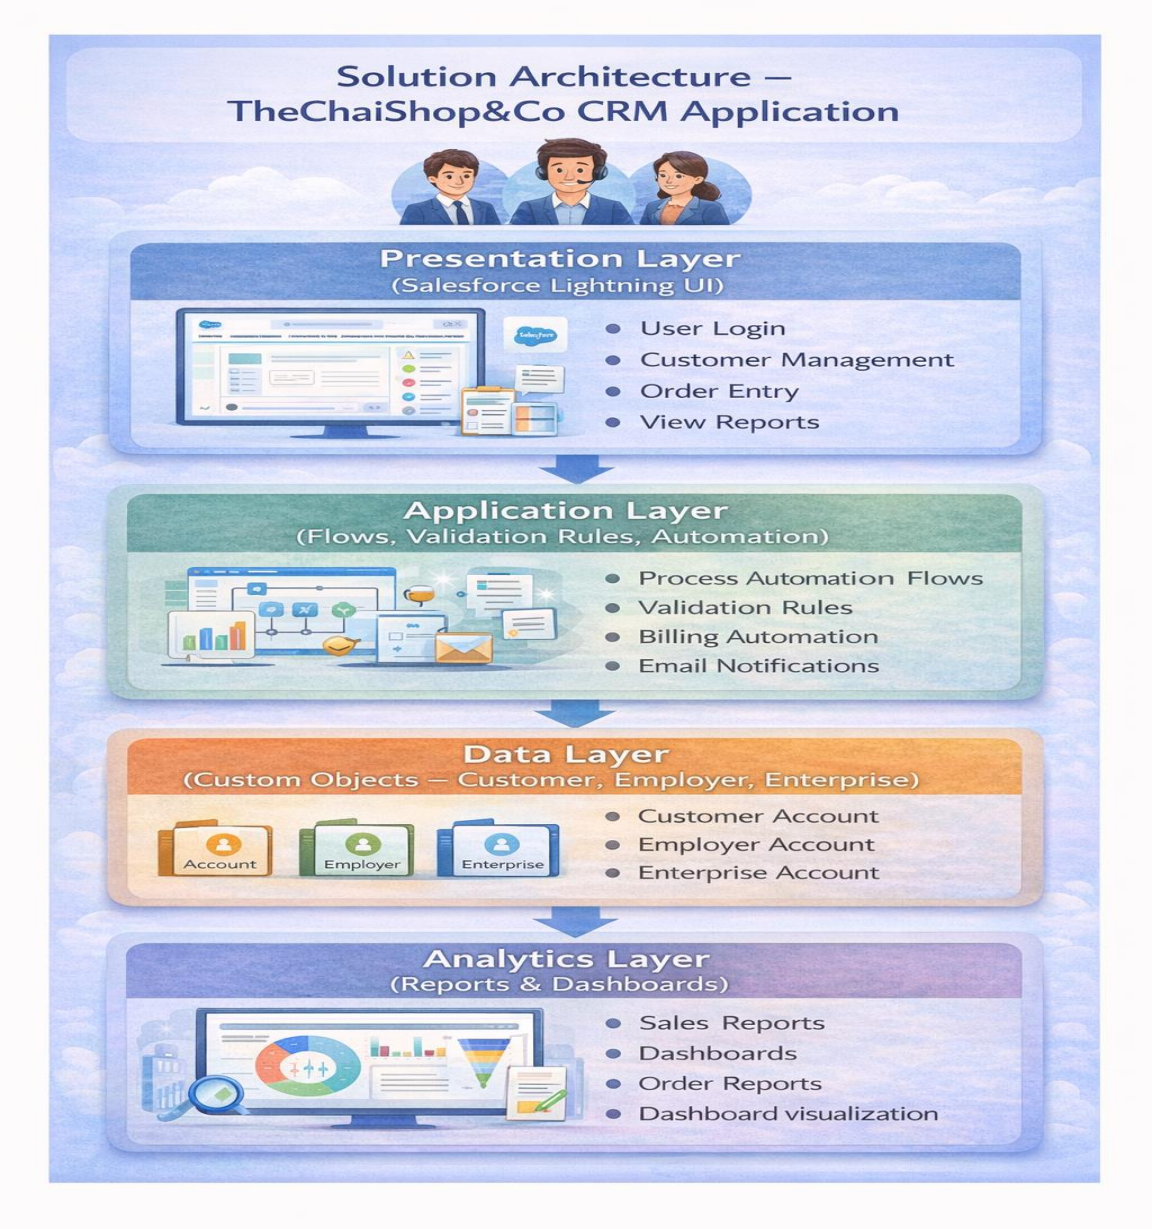
1. Presentation Layer – Lightning UI

2. Application Layer – Flows and Logic

3. Data Layer – Custom Objects

4. Analytics Layer – Reports and Dashboards

This layered architecture ensures modularity, scalability, and maintainability



5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- **The CRM application for TheChaiShop&Co was developed using an Agile development methodology with multiple milestones and sprint cycles to ensure systematic progress.**
- **A Salesforce Developer Edition account was created to configure and develop the CRM system in a cloud-based environment.**
- **Custom objects such as Customer Account, Employer Account, and Enterprise Account were designed to store and manage business data efficiently.**
- **Custom tabs and a Lightning Application were created to provide easy navigation and access to CRM features.**
- **Various fields, relationships, and global picklists were configured to maintain consistent and accurate data across the system.**
- **Page layouts and record types were implemented to organize data based on customer categories such as Online Orders and Walk-In Orders.**
- **Validation rules were applied to ensure correct data entry and avoid errors in fields such as phone numbers and identification details.**
- **Email templates and automated flows were created to send notifications such as birthday wishes and promotional offers to customers.**
- **Reports and dashboards were designed to visualize sales performance, customer activities, and order statistics.**
- **Continuous testing and sprint reviews were conducted to track development progress and fix issues.**
- **The project was successfully completed within the planned timeline by following structured planning and scheduling.**

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members

Sprint-1	**Developer Setup**	**USN-1**	**As an administrator, I want to create a Salesforce developer account so that the CRM system can be configured and deployed.**	**1**	**High**	**Akash**
Sprint-1	**Data Modeling**	**USN-2**	**As an admin, I want to create Customer, Employer, and Enterprise objects so that business data can be stored efficiently.**	**3**	**High**	**Jagathish**
Sprint-2	**Data Modeling**	**USN-3**	**As a user, I want separate tabs for each object so that I can easily navigate and manage records.**	**3**	**High**	**Manikandan**
Sprint-2	**Application Setup**	**USN-4**	**As a manager, I want a dedicated Lightning App so that all CRM features are accessible in one place.**	**3**	**High**	**Naveen Kumar**
Sprint-2	**Data Modeling**	**USN-5**	**As an admin, I want to create fields for customer and order details so that sales information can be stored accurately**	**5**	**Medium**	**Akash**
Sprint-2	**UI Design**	**USN-6**	**As a user, I want customized page layouts so that only relevant information is displayed when entering records.**	**5**	**High**	**Jagathish**

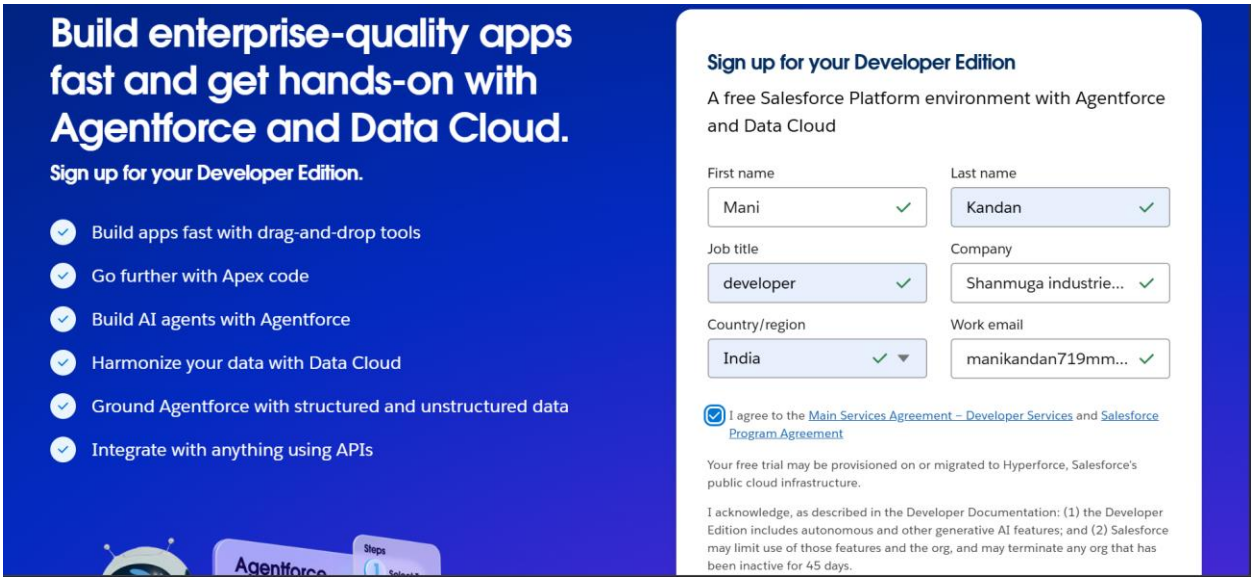
Sprint-3	**Automation**	**USN-7**	**As a system, I want validation rules so that incorrect data entries are prevented.**	**3**	**High**	**Mani kandan**
Sprint-3	**Automation**	**USN-8**	**As a system, I want automated flows to send email notifications to customers.**	**5**	**High**	**Manikandan**
Sprint-4	**Billing Automation**	**USN-9**	**As a system, I want to automatically calculate the total bill amount based on product selection.**	**5**	**High**	**Mani kandan**
Sprint-5	**Reports**	**USN-10**	**As a manager, I want sales reports so that I can analyze business performance.**	**4**	**High**	**Akash**
Sprint-6	**Dashboards**	**USN-11**	**As a manager, I want dashboards so that I can visually analyze customer and sales data.**	**4**	**Medium**	**Jagathish**

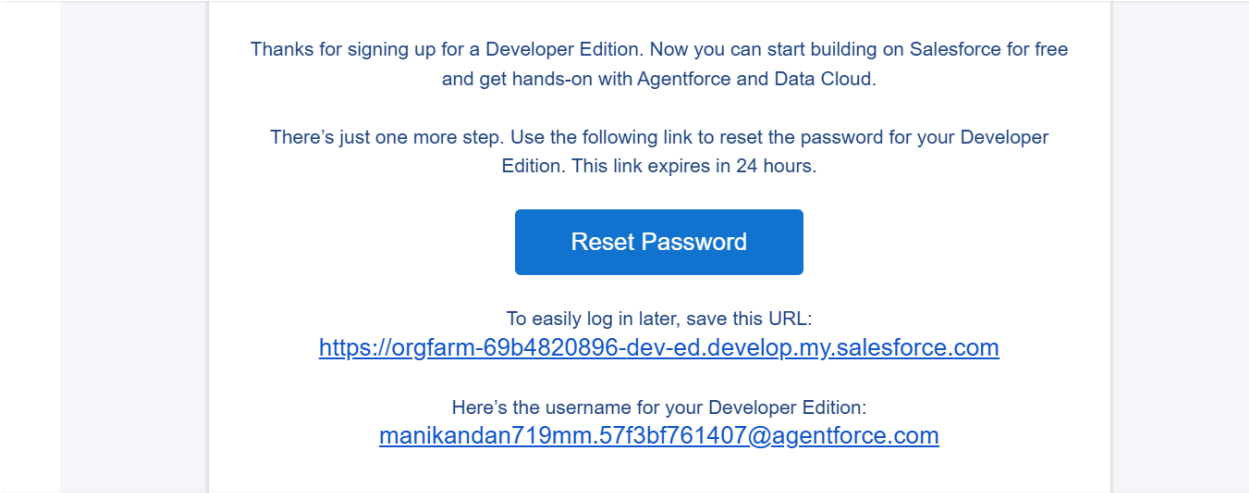
Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	**20**	**6 Days**	**10 Feb 2026**	**15 Feb 2026**	**20**	**15 Feb 2026**
Sprint-2	**20**	**6 Days**	**17 Feb 2026**	**22 Feb 2026**	**18**	**23 Feb 2026**
Sprint-3	**20**	**6 Days**	**24 Feb 2026**	**01 Mar 2026**	**20**	**01 Mar 2026**
Sprint-4	**20**	**6 Days**	**03 Mar 2026**	**08 Mar 2026**	**19**	**09 Mar 2026**
Sprint-5	**20**	**6 Days**	**10 Mar 2026**	**15 Mar 2026**	**20**	**15 Mar 2026**
Sprint-6	**20**	**6 Days**	**17 Mar 2026**	**22 Mar 2026**	**20**	**22 Mar 2026**

1. Salesforce Developer Account Creation

In the first step of the project, a Salesforce Developer account was created to build and test the CRM application. The developer edition provides a cloud environment where custom objects, automation, and reports can be implemented.

The account was created by registering on the Salesforce developer portal and verifying the email. After activation, the Salesforce setup page was accessed to begin the CRM development process.





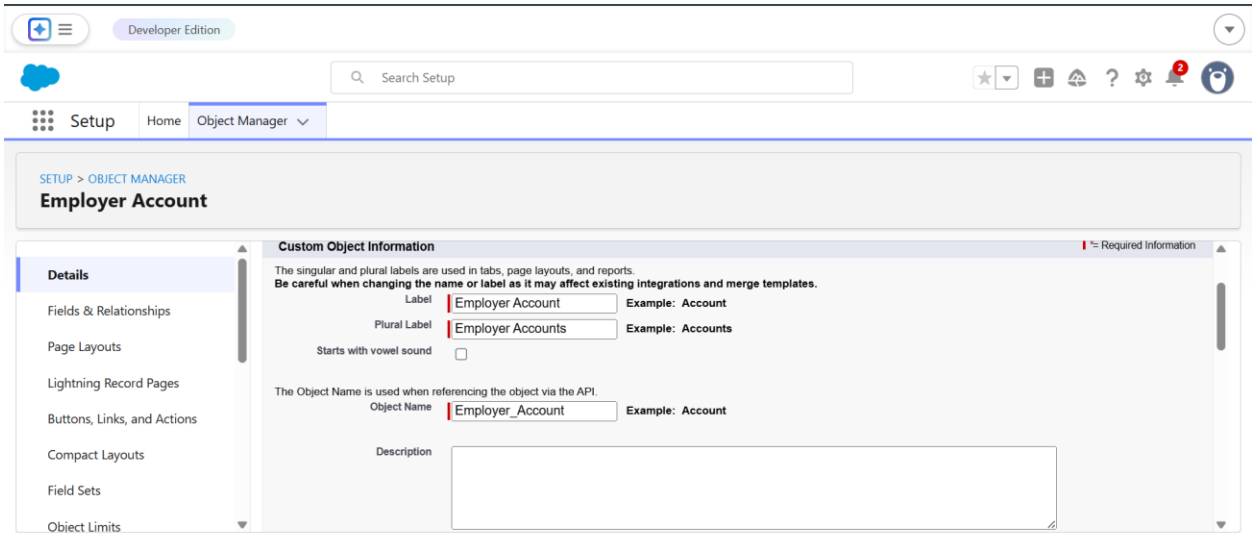
2. Custom Object Creation

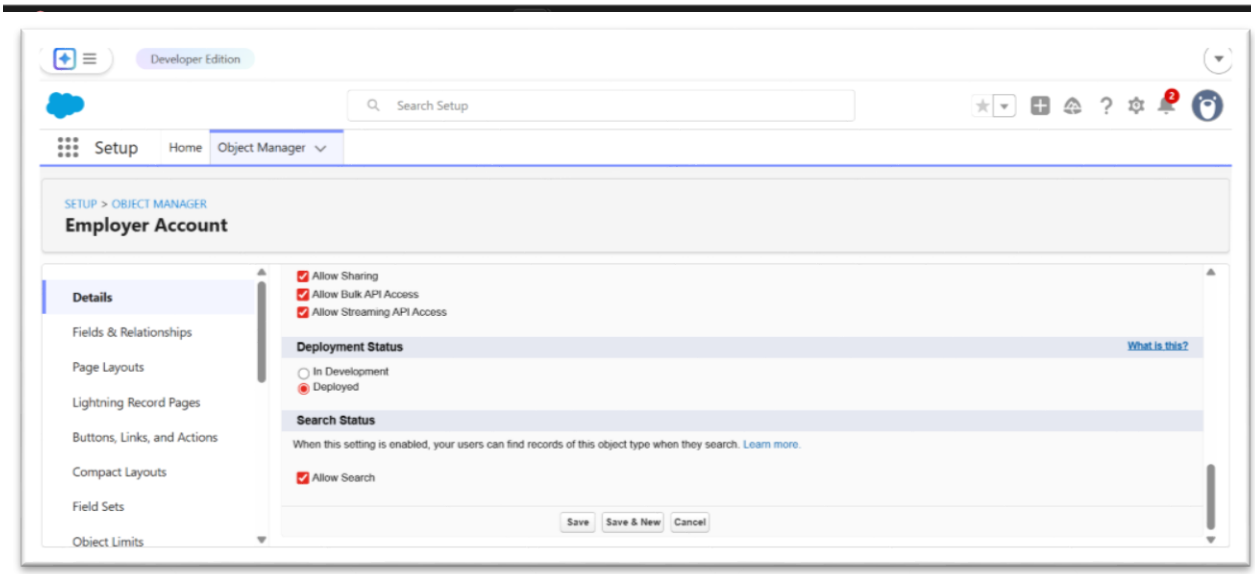
Custom objects were created to store the business data of TheChaiShop&Co. These objects help manage different types of records within the CRM system.

The following custom objects were created:

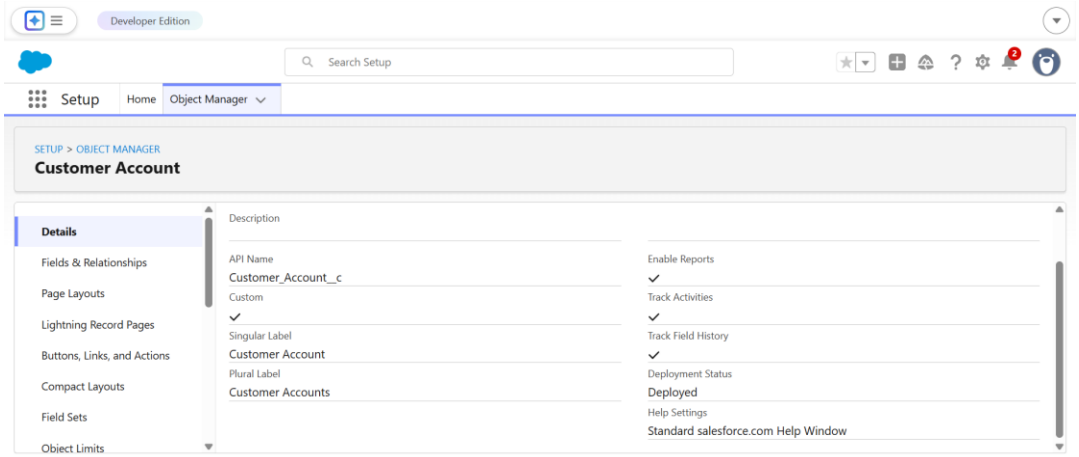
- **Employer Account**

•

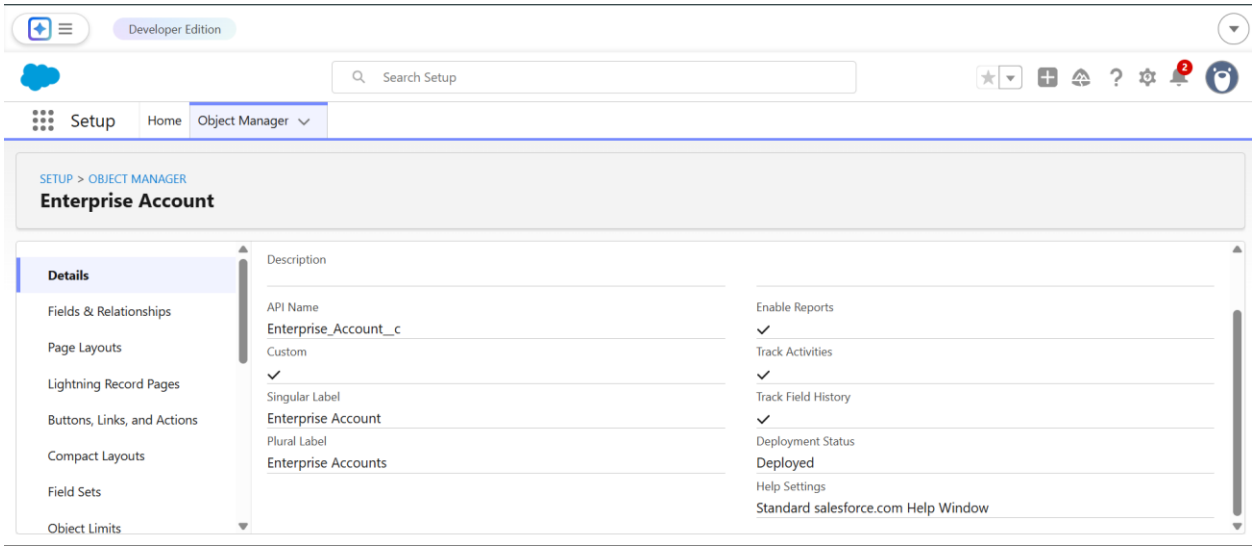




Customer Account



- **Enterprise Account**



Each object stores specific details such as names, contact information, and relationships between different entities.

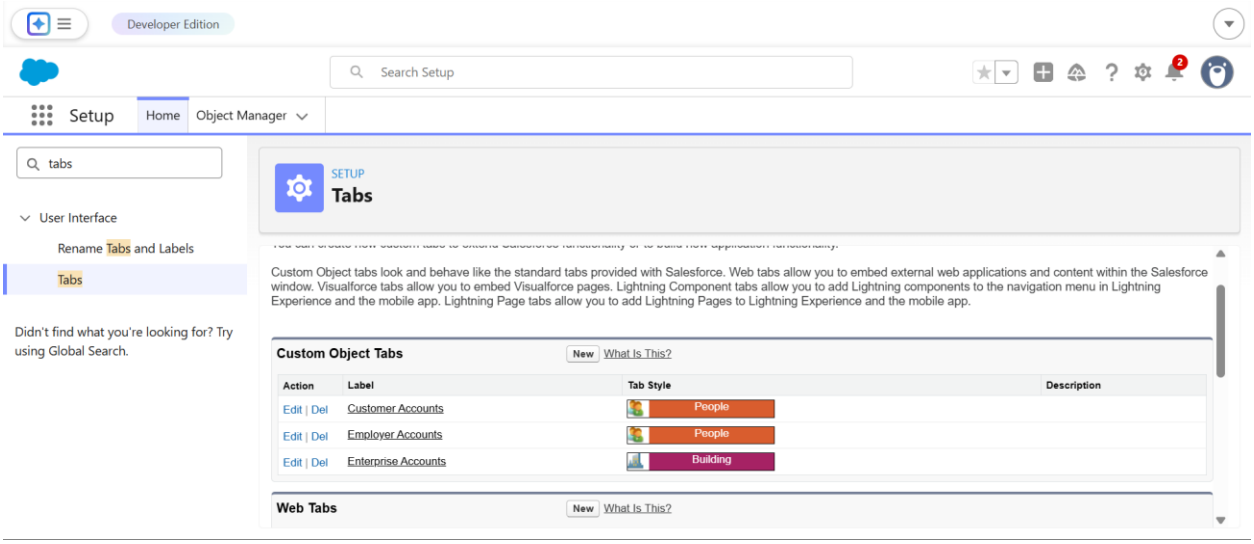
3. Custom Tabs Creation

To make navigation easier, custom tabs were created for the newly created objects. These tabs allow users to access records directly from the application menu.

Tabs were created for:

- **Employer Accounts**
- **Customer Accounts**
- **Enterprise Accounts**

This improves usability and helps users quickly navigate between different records.



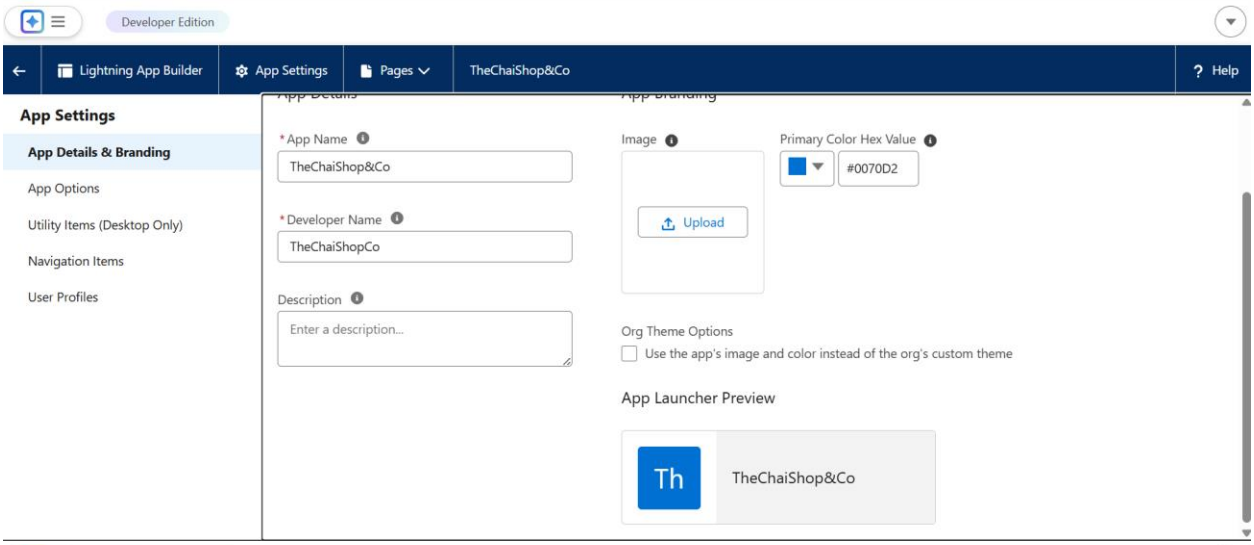
4. Lightning App Creation

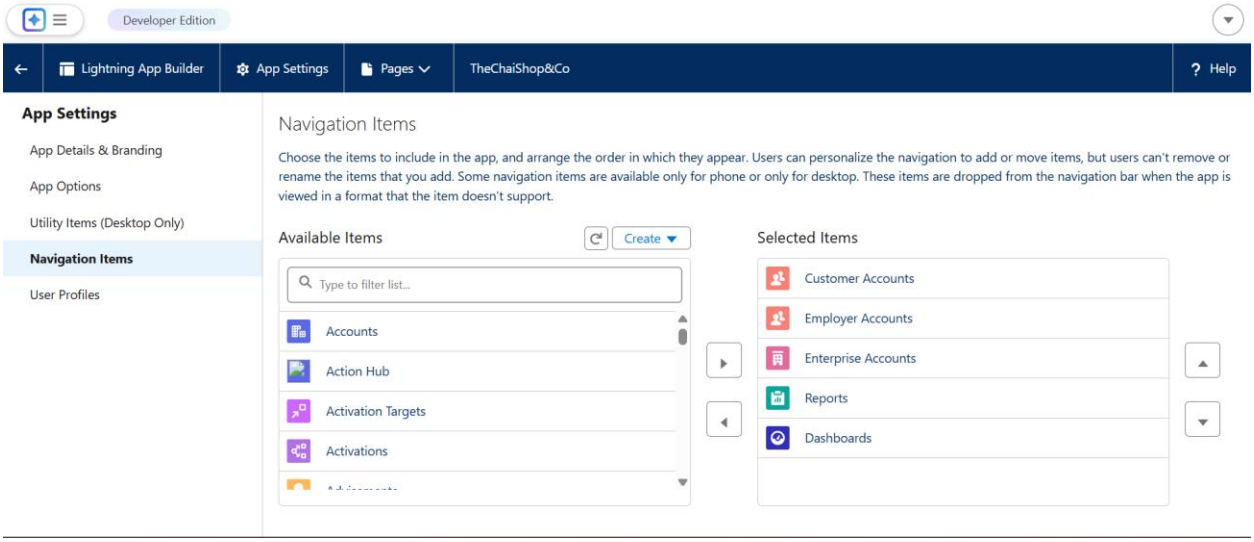
A Lightning application named TheChaiShop&Co was created using Salesforce App Manager.

This application provides a centralized interface where users can manage all CRM operations including customers, employers, enterprise accounts, reports, and dashboards.

Navigation items added to the application include:

- Customer Accounts
- Employer Accounts
- Enterprise Accounts
- Reports
- Dashboards





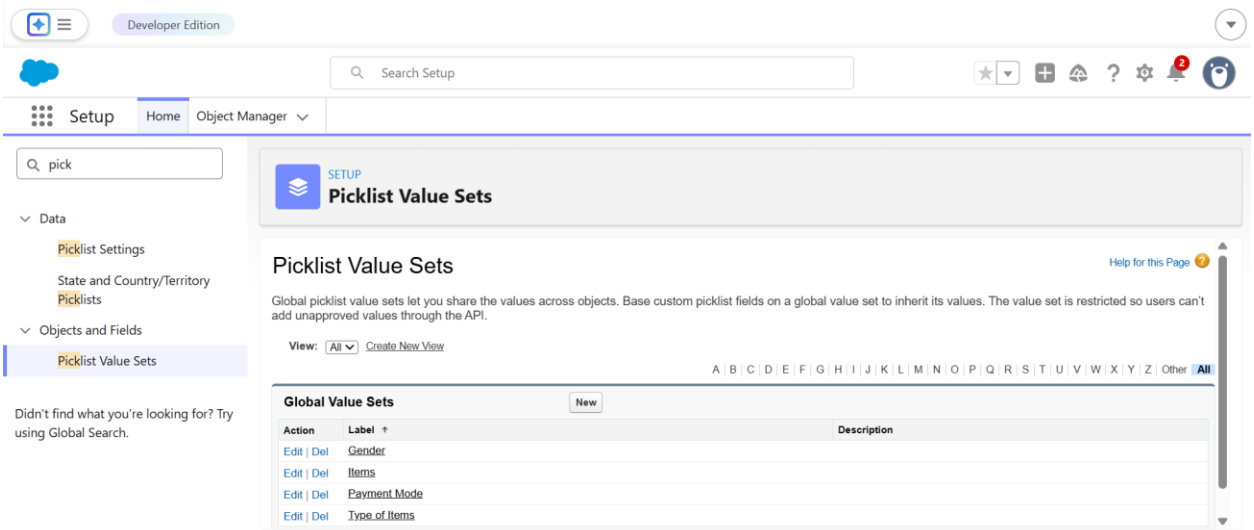
5. Global Picklist Creation

Global picklists were created to maintain consistent values across the application.

The following global picklists were implemented:

- **Gender**
- **Items**
- **Payment Mode**
- **Type of Items**

Using global picklists helps maintain standardized data and prevents inconsistent entries in records.



6. Fields and Relationships

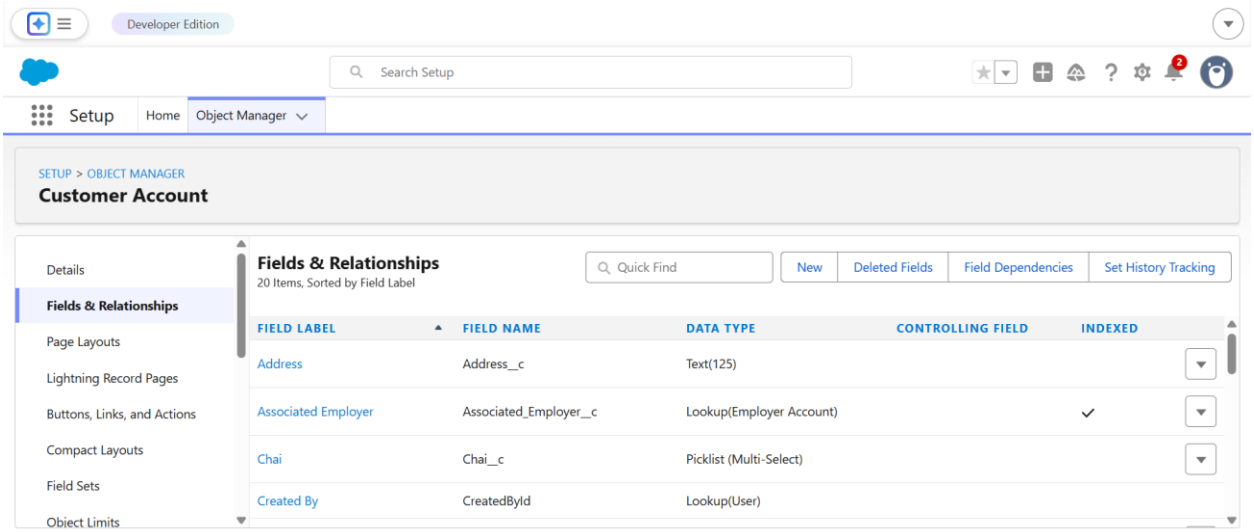
Custom fields were created in each object to store important data. These fields include text, picklist, phone, email, formula, and lookup relationship fields.

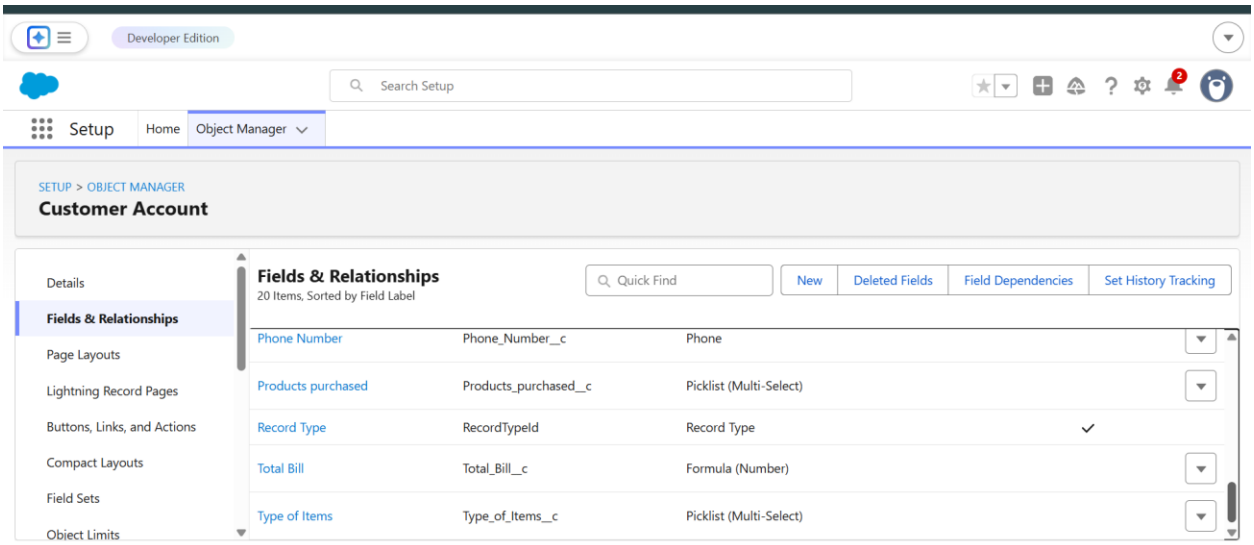
Examples of fields created:

- **First Name**
- **Last Name**
- **Phone Number**
- **Email ID**
- **Date of Birth**
- **Address**
- **Products Purchased**
- **Payment Mode**

Lookup relationships were also created to connect Customer Accounts with Employer Accounts, enabling relational data management.

(Insert Screenshot: Fields & relationships)





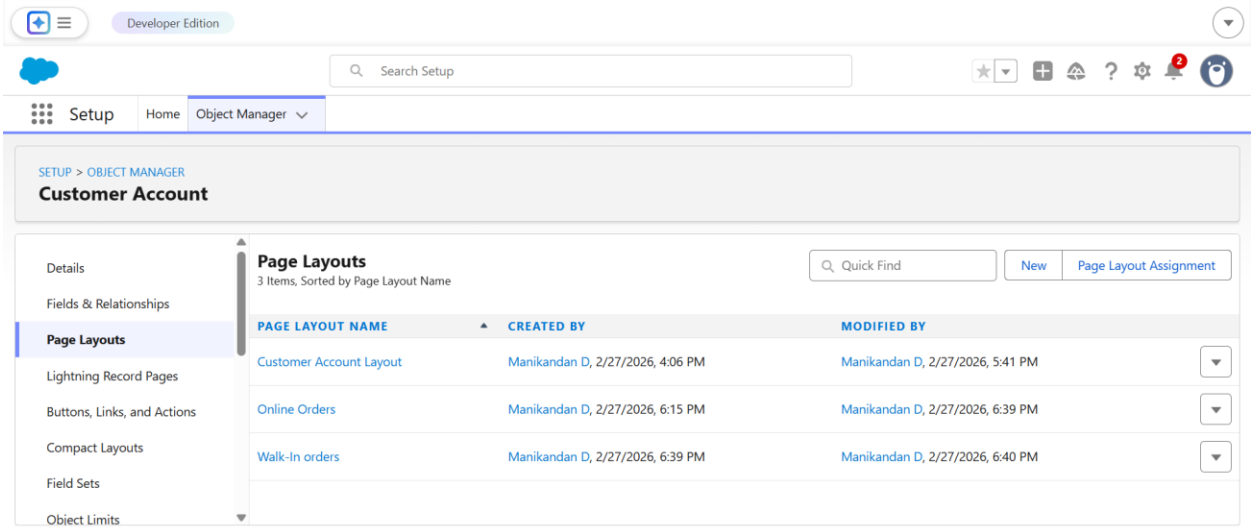
7. Page Layout Creation

Page layouts were created to control how fields appear on the record page.

Two layouts were designed for customer accounts:

- **Online Orders Layout**
- **Walk-In Orders Layout**

These layouts display different fields based on the order type, improving data entry efficiency.

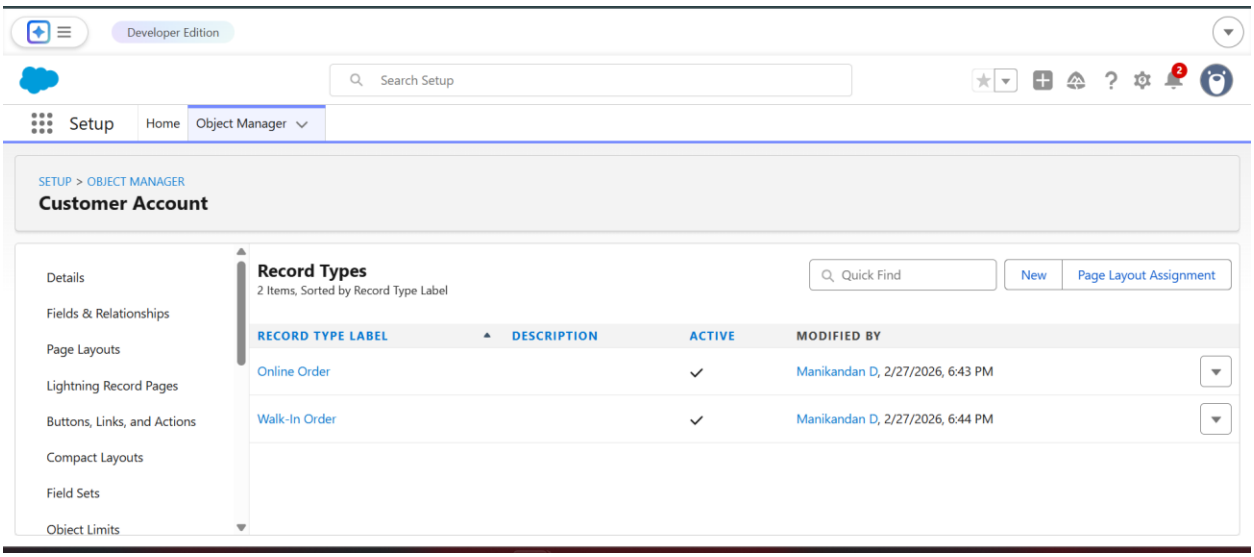


8. Record Types

Record types were created to differentiate between Online Orders and Walk-In Orders.

Each record type is linked to a specific page layout, ensuring that users see only relevant fields while creating or editing records.

This improves data organization and simplifies the CRM workflow.



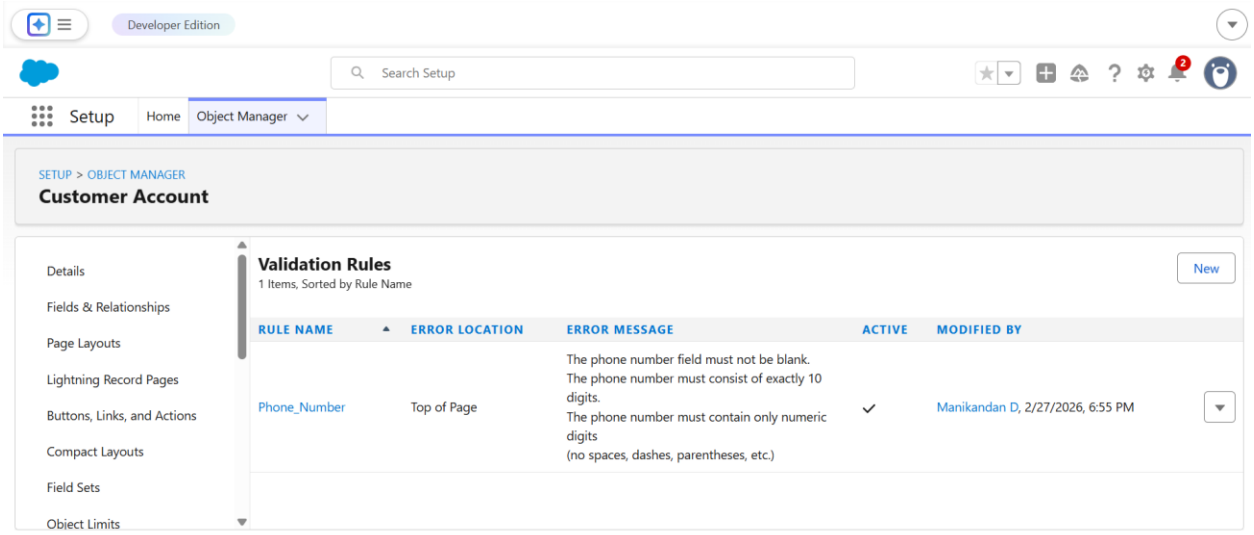
9. Validation Rules

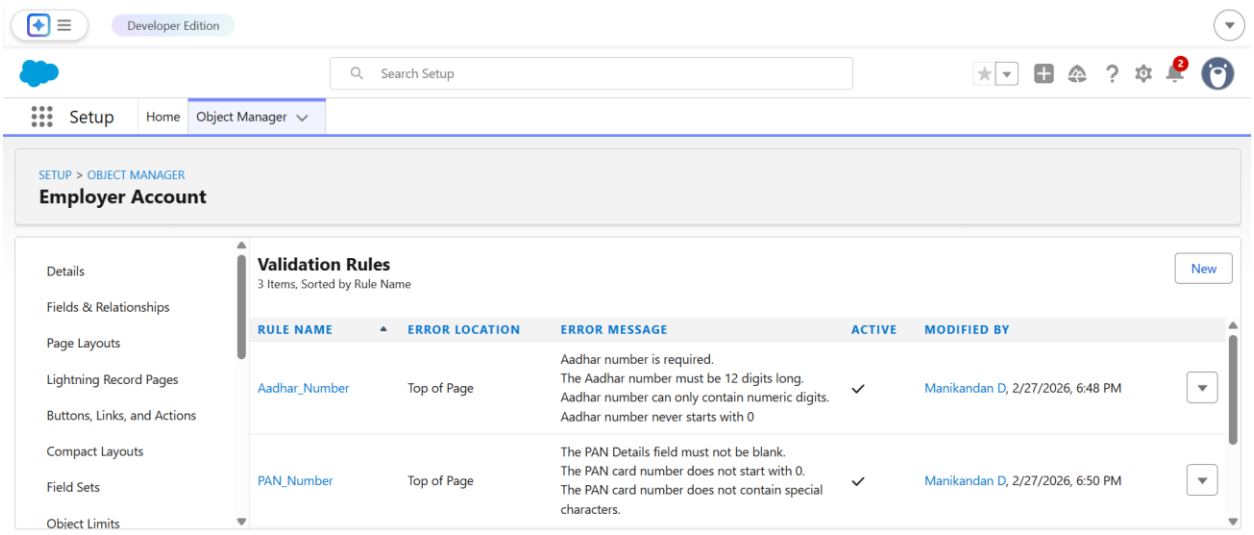
Validation rules were implemented to ensure accurate data entry in the system.

Examples include:

- **Aadhaar number must contain exactly 12 digits**
- **Phone number must contain 10 digits**
- **PAN number must follow the correct format**

These rules prevent invalid data from being saved in the CRM system.





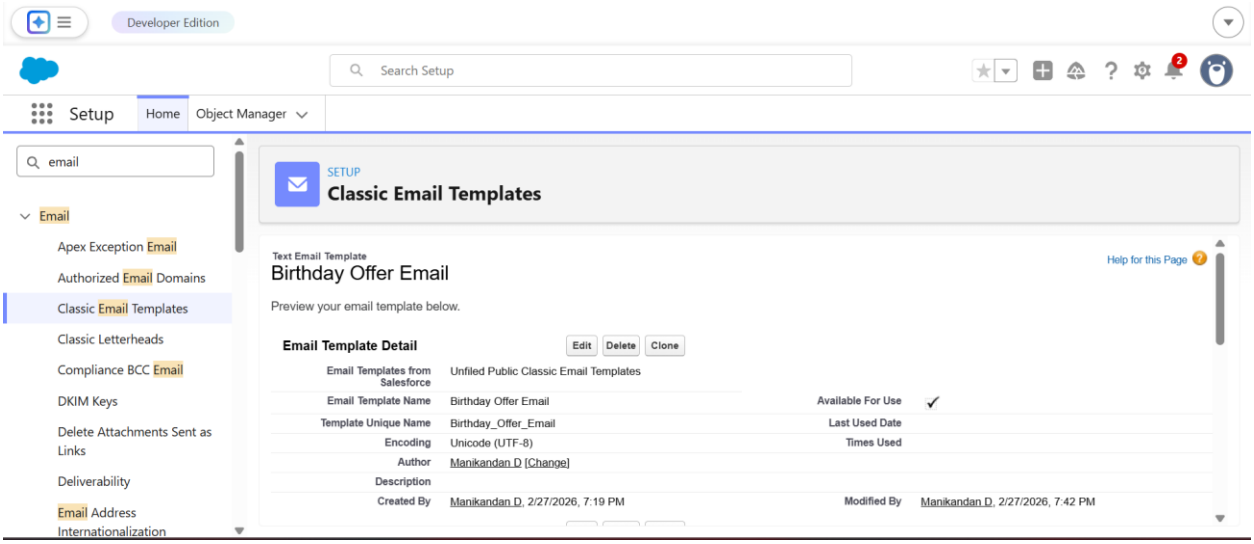
10. Email Template

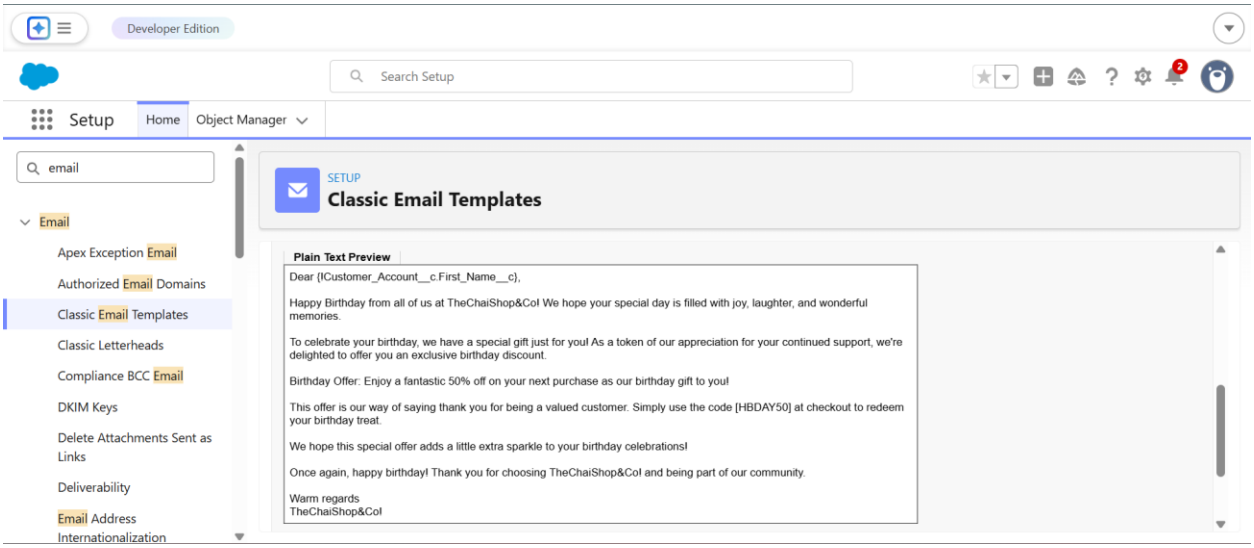
An email template called Birthday Offer Email was created.

This template automatically sends a birthday greeting to customers along with a special discount offer. The email includes merge fields to personalize the message using the customer's name.

This feature helps improve customer engagement and loyalty.

(Insert Screenshot: Email template)





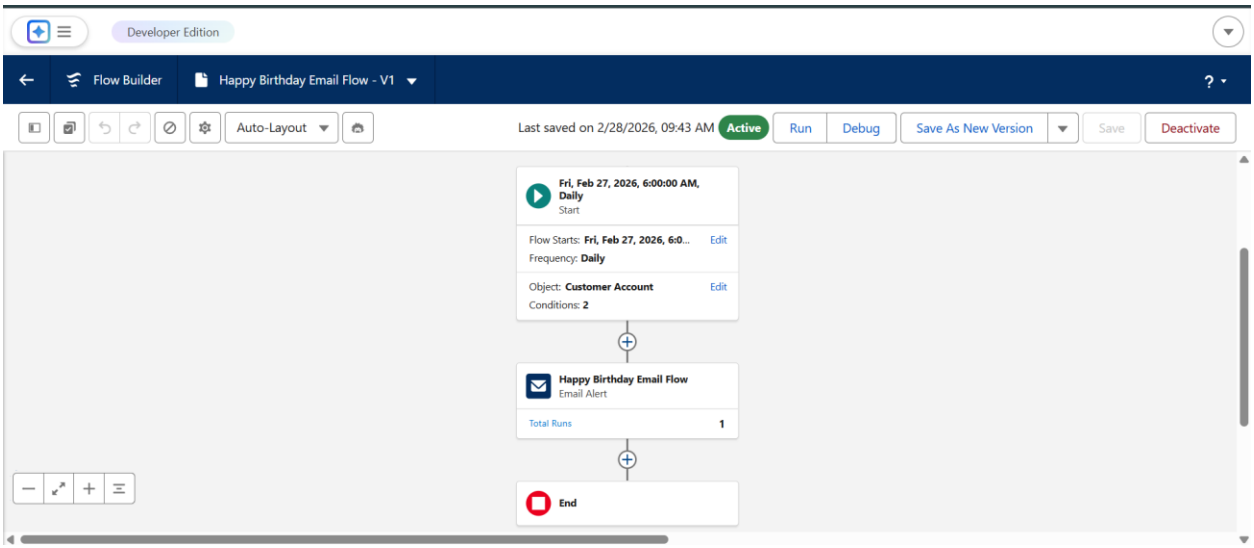
11. Automation Using Flows

Salesforce flows were implemented to automate business processes.

For example:

- **Sending birthday email notifications to customers**
- **Updating records automatically**

Automation reduces manual work and ensures timely communication with customers.



12. Reports and Dashboards

Reports were created to analyze sales and customer data. Dashboards display this data visually using charts and graphs.

Managers can use dashboards to monitor:

- **Sales performance**
- **Customer activities**
- **Product demand**

These insights support better business decision-making.

13. Conclusion

The CRM Application for TheChaiShop&Co successfully automates customer relationship management using Salesforce. The system manages customer data, processes orders, calculates billing automatically, and provides real-time reports and dashboards.

Additionally, automation features such as email notifications enhance customer engagement and improve overall business efficiency.
